Homeschooling for College Credit Cindy LaJoy, Jennifer Cook-DeRosa, LeAnn Gregory, 2018-09-27 The U.S. Department of Education reports that about half of the students who start college will never finish and 75% will graduate with student loan debt. Homeschooling for College Credit teens graduate high school with about 1 year of college under their belts, but motivated teens can finish their degree. Homeschooling for College Credit brings the goal post closer and teaches you how to pay cash as you go. Becoming a teacher Josef de Beer, 2020-12-31 This book disseminates original research on learning in and from
practice in pre-service teacher education. Authors such as Lederman and Lederman describe the student teaching practicum (or work-integrated learning [WIL]), which is an essential component of pre-service teacher education, as the ‘elephant in the room’. These authors note that ‘the capstone experience in any teacher education programme is the student teaching practicum... [a]fter all, this is where the rubber hits the road’. However, many teacher educators will agree that this WIL component is sometimes very insufficient in assisting the student teacher to develop their own footing and voice as a teacher. This is the ‘gap’ that this research book addresses. Most of the chapters in the book report empirical data, with the exception of two chapters that can be categorized as systematic reviews. WIL is addressed from various angles in the chapters. Chapter 6 focuses on research related to what makes Finnish teacher education so effective, and in Chapter 4 researchers of the University of Johannesburg disseminate their findings on establishing a teaching school (based on Finnish insights) in Johannesburg. Chapter 3 highlights the challenges faced in open-and distance learning teacher education contexts. Several of the chapters disseminate research findings on alternative interventions to classic WIL, namely, where “safe spaces” or laboratories are created for student teachers to learn and grow professionally. These could either be simulations, such as software programmes and avatars in the intervention described in Chapter 2; student excursions, as the findings in chapters 5, 7 and 10 portray; or alternative approaches to WIL (e.g. Chapters 11 and 12). The book is devoted to scholarship in the field of pre-service teacher education. The target audience is scholars working in the fields of pre-service teacher education, work-integrated learning, and self-directed learning. The book makes a unique contribution in terms of firstly its extensive use of Cultural-Historical Activity Theory as a research lens, and secondly in drawing on various theoretical frameworks. Both quantitative and qualitative research informed the findings of the book.

**The Periodic Table of Elements Coloring Book** Teresa Bondora, 2010-07-31 A coloring book to familiarize the user with the Primary elements in the Periodic Table. The Periodic Table Coloring Book (PTCB) was received worldwide with acclaim. It is based on solid, proven concepts. By creating a foundation that is applicable to all science (Oh yes, Hydrogen, I remember coloring it, part of water, it is also used as a fuel; I wonder how I could apply this to the vehicle engine I am studying...) and creating enjoyable memories associated with the elements science becomes accepted. These students will be interested in chemistry, engineering and other technical areas and will understand why those are important because they have colored those elements and what those elements do in a non-threatening environment earlier in life.

**Internal Auditing Theory--A Systems View** G.A. Swanson, Hugh Marsh, 1991-05-09 In this work, G.A. Swanson and Hugh Marsh present an interpretive and analytical study of the function of internal auditing, not only from the viewpoint of its role in an organization, but also in regard to the role it plays in the economics of societies and governments. They create a theory of internal auditing and place it within the context of a scientific conceptual framework called Living Systems Theory. Using this approach, they are able to provide a basis for developing a systematic theoretical framework of internal auditing, as well as a theory based on observable, measurable entities. The book begins with a survey of the auditing profession and an introduction to the basic principles of the Living Systems Theory. From this base, Swanson and Marsh discuss a series of
specific issues and areas of concern in internal auditing, including its functions, profession, and history, and its professional standards. Subsequent chapters address such topics as money-information, non-monetary quantitative information, estimating compound measurement and forecasting error, non-quantitative assessments, concrete process analysis and living systems process analysis, and ethics. Throughout the book, Swanson and Marsh identify the advantages of using the living systems theory to advance the knowledge and understanding of organizations, and also propose a higher level of internal audit functions that can advance modern societies. This work will be an important tool for members of the accounting and auditing professions, for students of business and accounting practices, and for professionals in other business and finance positions.
